

MIS Seal

Universal Print Head Protector - Universal seal for black and Color inkjet cartridges. One size fits all inkjet cartridges, (HP, CANON, LEXMARK and OTHERS) and provides an air tight seal to prevent ink drying in the nozzles. It can be applied to wet or dry nozzle plate. It seals and protects the nozzle plate from drying due to exposure to air.

Installation Instructions:

- Wipe excess ink from nozzle plate (no drying necessary).
- Clean both sides of cartridges with alcohol applied to a paper towel.
- Remove release liner from the MIS-SEAL
- ROLL Seal onto nozzle plate and hold compressed against nozzle plate. Placing the Seal straight down onto the nozzle plate will trap and force air into the nozzles. You do not want this to happen.
- Apply tape to sides of cartridge to hold seal compressed against nozzle plate. Press tape firmly against sides of cartridge to seal adhesive.
